Profile

Dedicated full-stack software developer prioritizing user experience and championing Open-Source software.

Committed to continuous self-improvement, actively pursuing opportunities to enhance skills and broaden knowledge.

Professional Experience

Staff Software Development Engineer, *WhatIf Media Group*

01/2026 – Present

Led long-term projects aimed at modernizing processes to maintain technological relevance.

Remote, US

- Implemented an open-source drag-and-drop visual editor into the company's internal CMS. This tool integrates with AI models to create dynamic content, featuring fixed sections for business logic.
- Developed production ready AI agents using AWS Strands and Langchain to handle minor coding tasks along the codebase.

Senior Software Development Engineer, *WhatIf Media Group*

2023 – 01/2026

Overhauled outdated workflows through leadership of key modernization projects following a promotion.

Remote, US

- Developed a Next.js application to standardize frontend experiences using reusable and configurable components.
- Collaboratively integrated a headless Strapi CMS with a Next.js frontend, effectively replacing outdated Wordpress sites.
- Launched the development of a Neo4j-powered digital offer recommendation system, focusing on machine learning and data analysis.

Software Development Engineer II, *WhatIf Media Group*

2022 – 2023

At WhatIf, I managed projects in the digital marketing domain, focusing on web development.

Remote, US

- Maintained and operated an internal React CMS and a Java Vert.x backend, ensuring personalized user experiences through linked microservices.
- Used Java Vert.x and Spring Webflux for reactive framework implementation, enhancing system performance.
- Oversaw frontend development using React, combined with Redux and Bootstrap for a seamless user interface.

- Integrated AWS Cloud Services such as ECS, EKS, SQS, and S3 to improve scalability and flexibility.

Technical Leader, Technisys [!\[\]\(41316894b4442b785f9af741df7b015f_img.jpg\)](#)

Led a team in integrating the VU Fraud Analysis, an AI-powered fraud detection system, into HSBC Arg's home banking platform.

2022 – Present
CABA, Argentina

Sr Full-Stack Developer, Technisys [!\[\]\(fa0af60b6801543fcbf5ea18bb648edb_img.jpg\)](#)

Took on expanded responsibilities in the HSBC project, particularly after integrating MODO, a virtual wallet service, into the app, which led to a title change.

2022

Ssr Full-Stack Developer, Technisys [!\[\]\(645d49f191f071ee4108de96860343e6_img.jpg\)](#)

Joined Technisys as a developer for the HSBC project, focusing on enhancing HSBC Argentina's homebanking platform.

- Integrated SOAP and REST services into Technisys' core banking platform.
- Designed and developed pipelines using Azure DevOps.
- Engaged in front-end development with React and Redux (Sagas).
- Utilized Cordova to create native applications from React.

2021 – 2022

Ssr Full-stack Developer, Judicial Branch of the Nation (Government)

Development of a DDD compliant, service-oriented web application to replace an outdated project, featuring a modern UI redesign.

- Quarkus/SpringBoot, Java 11, Spring Data JPA
- REST, React, Redux
- Material UI, Typescript

2020 – 2021
CABA, Argentina

Junior Developer, Judicial Branch of the Nation (Government)

Migration of outdated systems to a service-oriented application using modern technologies: Java EE 8/11, Spring Data JPA, CDI, Wildfly, Oracle database, H2 Database for testing, REST API with JAX-RS, JUnit testing with Arquillian, Quarkus, Hibernate, Maven, and OpenAPI/Swagger.

2019 – 2020
CABA, Argentina

Software Developer & 3D Designer (Generalist), Freelance

Design and production of 3D content for multiple areas such as 3D printing, architectural visualizations, animation, publicity.

2017 – Present
CABA, Argentina

Skills

- | | | | |
|--------------------------------|-----------------|-----------------------------|-------------------------------------|
| - AI model integration | - Headless CMS | - Front-end standardization | - Digital marketing strategies |
| - AWS SQS | - AWS S3 | - OpenAPI/Swagger | - Service-oriented web applications |
| - Architectural visualizations | - Java | - Javascript | - C/C++ |
| - Clojurescript | - Python | - HTML/CSS | - PHP |

Education

Engineer in Applied Computing, UTN-INSPT

2016 – 2019
CABA - Capital
Federal, Argentina

Electromechanical Technician, Instituto Privado León XIII

2009 – 2015
CABA - Capital
Federal, Argentina

Languages

Spanish — Native • **English** — Fluent

Projects

Hibernate Populator, *Testing tool for populating test data in Hibernate/JPA applications*

Now in it's "beta" stages, this project was made to help test the migration of an old, yet massive, application that used very inter-related entities.

DESIGN3D.xyz, *My personal portfolio website*

I first started my website with the idea of making it as light as possible but I ended up trying to emulate my Arch i3 setup. Still a work in progress, as I may end up creating high/low bloat variants of the site and let the user choose, since the usage of Babylon.js to display my 3D works can prove challenging for some devices.

BlendRef, *Reference image windows for Blender 2.80+*

This is my current work in progress, it's an add-on for Blender 2.80+ that looks to implement the tools of a program like PureRef or RefBoard directly to Blender.
